### SUMMARY

Full-stack Software Engineer with 3+ years of experience building ERP and business applications using React.js, Next.js, Node.js, and PostgreSQL/MongoDB. Currently own the Sales, Purchase, and Approval Workflow modules of a SaaS ERP product modeled on SAP Business One. Experienced in designing REST APIs, relational database schemas, and end-to-end business workflows, as well as maintaining and extending production systems.

### PROFESSIONAL EXPERIENCE

- Software Engineer (II) | Techzu | Remote Oct 2025 – Present
- Own the Sales and Purchase modules of a SaaS ERP product modeled on SAP Business One, including a configurable multi-level approval workflow with rule-based approvers, approval stages, and audit history.
  - Designed PostgreSQL schemas and RESTful APIs in Node.js/Express.js for transactional ERP data, including document linking across modules.
  - Built React.js interfaces for complex ERP forms and data grids, focused on fast data entry and usability for business users.
- Software Developer | Al Hidaayah | On-site May 2025 – Sep 2025
- Developed a School Club Management system from scratch, covering club creation, student membership, and event management.
  - Maintained and extended the institution's School ERP software in production: resolved bugs, delivered new features, and improved performance.
  - Built responsive interfaces with React.js and Next.js and designed RESTful APIs backed by MongoDB/MySQL.
- Full Stack Developer | Smart Framework | On-site Jul 2024 – Apr 2025
- Designed and integrated RESTful APIs connecting React.js/Next.js frontends with Node.js backends for client web applications.
  - Modeled, optimized, and managed MongoDB and MySQL databases for reliable data storage and retrieval.
  - Worked on a Product Management system and GRS (Grievance Redress System), a Government of Bangladesh project.
- Frontend Developer | Z-Eight Tech | On-site Jul 2023 – Jun 2024
- Built interactive web applications with React.js and Next.js, integrating REST APIs alongside backend developers.
  - Worked on client projects including Warehouse Management and Turf Management systems.
  - Delivered client projects on fixed deadlines in a fast-paced team environment.

### PROJECTS

- Cloud ERP System – (Product under development)
- Features:** Sales and purchase workflows (Quotation → Order → Delivery → Invoice → Return/Credit Memo; PO → Goods Receipt → AP Invoice), document Copy To/Copy From with multi-document merging, accounting (tax, discounts, payment terms, exchange rates), user-defined fields, attachments, financial management, PDF reports, and role-based access.
  - Technologies:** React.js, Node.js, Express.js, TypeScript, PostgreSQL, Sequelize, Redis, BullMQ, AWS S3, Docker, Nginx, GitHub Actions (CI/CD), Sentry
- Hotel Booking System – [Link](#)
- Features:** Room booking with authentication, hotel and room management, admin and user dashboards, notifications, online payment (SSLCommerz), and search/filtering by division, district, and area.
  - Technologies:** React.js, Redux, Node.js, Express.js, MongoDB, Prisma, Tailwind CSS
- Warehouse Management System – [Link](#)
- Features:** Authentication, warehouse and product transfer management, CSV/PDF import and export, reporting, and a POS module.
  - Technologies:** React.js, Redux, Laravel, MySQL, SMTP, REST API

### CORE SKILLS

|                       |                                                                                                                                                                                                                      |
|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Languages:            | JavaScript, TypeScript, SQL                                                                                                                                                                                          |
| Frontend:             | React.js, Next.js, Redux, Tailwind CSS, Bootstrap                                                                                                                                                                    |
| Backend:              | Node.js, Express.js, Nest.js, Socket.IO, BullMQ (job queues), Redis (caching, rate limiting), Cron jobs, Puppeteer (PDF generation)                                                                                  |
| Databases & ORM:      | PostgreSQL, MySQL, MongoDB, Prisma, Sequelize, Mongoose                                                                                                                                                              |
| DevOps & Cloud:       | Docker (multi-stage builds), GitHub Actions (CI/CD), Nginx, Coolify (self-hosted PaaS), AWS S3 / S3-compatible storage, Multi-environment deployment (Staging / UAT / Production), Vercel, Netlify, Firebase, Heroku |
| Monitoring & Logging: | Sentry, Pino                                                                                                                                                                                                         |
| Tools & Testing:      | Git, GitHub, Postman, Jest                                                                                                                                                                                           |

### EDUCATION

Bachelor of Science (BSc) in Electrical & Electronic Engineering 2022

Port City International University

### CERTIFICATIONS & TRAINING

- Web Development Internship | Company: Carriastic [Credentials](#)
- Frontend Web Development & Responsive Design | Organized by: BASIS [Credentials](#)
